LUMEER

YOUR ALL-IN-ONE BUSINESS APPLICATION INSTANTLY AT HAND
Solve all your data and reporting tasks with Lumeer platform
WHITE PAPER

THE CHALLENGE

Do you miss an application to handle your agenda? Are you tired of recreating your Excel or Google Sheet when they get full of formulas and become buggy? And yet you need a way to handle your data and reports somehow.

⤲ What are the Options?

Having a specialized application for each separate problem domain does not scale well, it might be good to have the business data at a single location. On the other hand large corporate solutions are too expensive, not easy to understand, require trainings, may be overly complex and even relatively slow because of all their features you might even not need.

Either way, with existing solutions there are most likely details that do not fit your business precisely. Then you need to seek for customization, or change in the way how your business operates. Both of these approaches require an analysis and implementation that can force you to stick with messy spreadsheets.

Moreover, to be able to create a desired report, you first need to transfer your mind to the world of tables and slice the problem domain into table rows.

Even though it is possible to achieve the desired outcome in a spreadsheet and even share it with colleagues and work on it together, there is no notion of the meaning of data. Everyone has their own understanding and interpretation which makes the whole process error prone.

PRODUCT DESIGN

🔓 Freedom of Spreadsheets but Bullet Proof

What if we told you that you can input your data in the same form you want to see them directly? Like you would do on a piece of paper.

We realized that there are some repeating patterns in how people work with data, how they want to see them and what are the most commonly used reports. And these are the desired outcomes. So instead of asking you to parse your problem, we do that for you. Just select which is the desired representation of data you want to use and fill in your information. Lumeer will help you with the rest and in the background he puts the data into tables with correct structure. This allows you to later change your mind and see the same data in a different type of view.

Except for a typical data table, the usual views of data are a pivot table, mapping of data into a calendar or a map, a Gantt chart, an ordinary chart (e.g. pie, line, bar charts), agile board, an interactive combination of data entries and text, graph of link and dependencies and more.

We understand that companies search for enterprise level abilities and have high demands on the systems they use. This is why we take many features as absolutely necessary. All data are mirrored on multiple drives and regularly backed up. Lumeer keeps track of changes history. There are access control options that provide dynamic level of detail as needed - either you allow the whole group of users to perform a given operation or you can be user specific based on other conditions like data content, current time, or user name. Collaboration in your organisation is a sure thing.

BENEFITS

REDUCE COMPLEXITY

All your data with their reports on a single place where you can share and collaborate.

STABILISE PROCESSES

Create and share your processes the way you already work and like.

START RIGHT OFF

Put in your data in any format you currently have. Leverage the best values you already have.

ADMINISTRATION FREE

No need to install, configure and maintain the system. Enjoy all the benefits of cloud based service.

VARIABLE PRICING

Add and remove users as you need, switch between plans of subscription.

EXPERT HELP

Take the advantage of advanced technical help of our experts.

Case Study: Bicycle Repair Shop

A Bicycle Repair Shop creates a list of spare parts and a database of typical maintenance procedures including the parts needed and time estimates. Not only they created a great knowledge base for any new hires but also they are able to provide very precise cost estimates.

Lumeer can provide an analysis of what operations typically come together and which additional repairs are typically needed given the bike conditions and other repairs already in the order. These can be either automatically suggested to the customer (i.e. "wouldn't you want us to also check your chain condition?") and also offered to an employee taking the order to communicate with the customer what possible findings are likely to appear.

Once there is a new price list published by spare parts suppliers, the Bicycle Repair Shop does not need to rewrite the old table and invalidating all previous repair protocols and bills. Instead, they add a time dimension to the price list and enter the new prices completely separately. They can not only see the price change and development in time but they can also use the correct values with both old and new repair orders.

Case Study: Architectonics Studio

An architectonics studio needs to keep track of a wide variety of information and see the same data from multiple different points of view. They typically deal with authorities, their customer, construction companies and each of them have their own constraints and they are after a different type of data. It is necessary to see how information evolves over time, who is its author, where it originated, is it a consequence of anything else, and who are the subjects affected by this information.

Lumeer not only provides all the necessary abilities but also have the information instantly at hand and helps recording new information really quickly by learning from previous data and offering estimated values of various data parameters.

IMPORTANT CONSIDERATIONS

▤ Deployment

With your subscription you have no additional expenses on deploying, configuring and running Lumeer. We take care of the cloud deployment that is just ready for you. Your data are kept safe with regular back-ups and we provide you the appropriate performance without the need to buy your own hardware.

✎ Subscription

Subscriptions are offered on a monthly or an annual basis and include access to new versions at no additional cost. There are no large upfront license fees or hidden expenses. Regular product updates provide enhancements, new features, new platform certifications, and access to the latest defect and security fixes. Open-source approach allows us to leverage the best results from our community and allows you to provide your own contributions. This approach also guarantees that we provide you astonishing service because this is where the value you buy actually is and we really appreciate your trust.

Give it a try today for free with no obligations! Visit www.lumeer.io

🎓 Training and Assistance

We offer a range of services for Lumeer platform including:
- **Knowledge base** covering a lot of topics to quickly solve your problems.
- **Online materials** to help you discover all features and endless possibilities of Lumeer in videos.
- **Trainings** and **webinars** to interactively work with you and provide answers to all your questions.
- **Chat** to assist you whenever you might need help.
